| Classification: | **Supplemental:** Traumatic Brain Injury (TBI)  
**Exploratory:** Spinal Cord Injury (SCI)-Pediatric (4–12 years) and Sports-Related Concussion (SRC) |
| Short Description of Instrument: | The Bruininks Oseretsky Test of Motor Proficiency-2 (BOT™-2) (Bruininks and Bruininks 2005) consists of 8 subtests of motor proficiency, including fine motor precision, fine motor integration, manual dexterity, bilateral coordination, balance, running speed and agility and upper-limb coordination. Normative data are available for four composite scores and an overall motor proficiency score.  
The test is administered with game-like tasks that require 15–20 minutes (short form) or 45–60 minutes (complete battery) to complete. |
| Scoring: | Standard scores have M=50, SD=10. |
| Comments / Special Instructions: | SCI-Pediatric-specific: Fine motor can be done from wheelchair level. All gross motor items require ambulation. |
SCI-pediatric-specific reference: There have been no studies in children with SCI. |
