Vineland-II, Socialization Scale**

<b>Availability</b>	Please visit this website for more information about the instrument: <a href="#">Vineland Adaptive Behavior Scales, Second Edition</a>
<b>Classification:</b>	<b>Supplemental:</b> Traumatic Brain Injury (TBI)
<b>Short Description of Instrument:</b>	<p>The Vineland-II, Socialization Scale is a domain within the Vineland-II test which assess a subject/participants personal and social skills from birth to adulthood. The Socialization Scale has three subdomains: Interpersonal Relationships, Play and Leisure Time, and Coping Skills.</p> <p>To determine the level of an individual's adaptive behavior a parent or caregiver is asked to describe the subject/participant's activities. Those activities are then compared to those of people with the same age in order to see whether the participant is average, above average, or in need of special help.</p>
<b>Scoring:</b>	Domains and Adaptive Behavior Composite—Standard scores (M = 100, SD = 15), percentile ranks, adaptive levels. Subdomain—V-scale score (M = 15, SD = 3), Adaptive levels, age equivalents. On Survey Interview and Expanded Interview Form only—V-scale scores, maladaptive levels for the optional Maladaptive Behavior Index. ASSIST™ software or Manual Scoring
