### Availability:
Please visit this website for more information about the instrument: Wide Range of Memory and Learning Second Edition.

### Classification:
**Supplemental:** Cerebral Palsy (CP), Multiple Sclerosis (MS), Neuromuscular Disease (NMD), Sports-Related Concussion (SRC), Subacute (after 72 hours to 3 months) and Persistent/Chronic (3 months and greater post concussion), and Traumatic Brain Injury (TBI).

### Short Description of Instrument:
**Benefit:** Provides an integrated set of memory tests that can be used across a life span.

**Ages / Grade:** 5 to 90 years.

**Administration Time:** Less than 60 minutes for core battery; 10 to 15 minutes for Memory Screening Form.

**Format:** Individually administered memory, delayed recall, and recognition tasks.

**Scores:** Index and subtest scores that can be converted to standard scores and percentiles for age-based performance comparisons.

**Sports-Related Concussion Specific:**

Advantage: This comprehensive memory measure is widely used in traumatic brain injury, though more often with children with moderate to severe levels of impairment. It includes a screening method and more in depth tests of learning, recall, and recognition.

Limitations: More often used in samples with mixed severity rather than concussion.
