

NINDS CDE Project

Working group: Demographics

Completed by: Kaitlyn Esposito, Dorothy Poppe

Date: June 9, 2016

The working group overall decided to utilize existing, generalized NINDS Common Data Elements (CDEs) for the Chiari I malformation Working Group Demographics. Current epidemiological research for Chiari I malformation does not provide a comprehensive understanding of any other, potentially unique, required demographic information. Therefore, the group supports the existing NINDS CDE recommendations for demographic information in research.
