2. Sensory Assessment

The sensory bedside assessment includes abnormal responses to light touch, pinprick and cold sensation compared with a non-affected control area above the level of injury. The sensory measures were intentionally selected to be appropriate for bedside examination and to detect and quantify sensory abnormalities: mechanical allodynia (pain in response to an innocuous mechanical stimulus), mechanical hyperalgesia (exaggerated response to a painful mechanical stimulus) and thermal allodynia (pain in response to an innocuous thermal stimulus) commonly associated with neuropathic pain types.
